

1. Deployment of Systems:

- Describe a specific instance where you were involved in the deployment of a technological system within a local government or national government context. What challenges did you face, and how did you overcome them? (20%)

2. Conducting Training/Engagement: • Explain the importance of training and engagement in ensuring the successful adoption of new systems. Provide examples of training methods you have employed and their effectiveness in enhancing user competency. (20%)

3. Technical Writing: • Discuss the role of technical writing in facilitating understanding and usage of technology in government operations. Illustrate how your technical writing skills have helped bridge communication between technical teams and non-technical stakeholders. (20%)

4. Project Management: • Analyze how your project management experience has shaped your approach to overseeing the implementation of digital solutions. What methodologies do you find most effective, and how do you measure project success? (20%)

5. Knowledge of eLGU and eGov Applications: • Reflect on your understanding of eElectronic Local Government Unit (eLGU) and eGovernmentPH (eGovPh) applications. How do these tools transform service delivery in local governance, and what insights can you offer on their potential for enhancing citizen engagement and administrative efficiency? (20%)

① I worked before in a private entity and relating to the question, we had an experience of a transition ~~from~~ of our system from Google to SAP. I was chosen as one of the Key Users of this new system, meaning we are the first users or the contact persons of SAP people and also the company was expecting for us to teach our colleagues (End-Users). One of the challenges was the pace of absorption of this new system. So for us, we just have to be patient and be as clear and simple in teaching our partners.

② One of the trainings I attended was the SAP Key-Users Training. Since this is new for us, bugs and other unexpected errors were experienced. So, in order for this new system to be as efficient and effective, we connected with SAP personnels from time to time and we conducted trainings for new updates of system.

③ Relating to the question again, from my previous company we have this program called "KAIZEN PROGRAM", in this program we technically write one simple project per year. I was fortunate enough to present my project in a national convention called "Q PAP" or the Quality Practitioner Association in the Philippines and won gold. So, in this project, I wrote it in a very simple way possible and presented in front of a non-technical stakeholders, such managers of different and various company.

④ I was once a Production Engineer specifically Feeds Production. I spearheaded the production of every feeds in our plant and in relation to project management, I treated my product as my project. One of the methods that I used is ~~LEAN~~ ^{LEAN} principle together with Good Manufacturing Practices. I used to produce high volume of feeds efficiently with these methods without or lesser rejections and also without customer complaints. I believe that is the measure of project success for me.

⑤ I believe the purpose of the eLGU and eGOVPH is somehow related, eLGU is designed for a much more smaller scale since it is ~~for~~ exclusive for LGU only unlike eGOVPH is for various National Agencies.

eLGU helps for the efficiency and transparency of ~~transact~~ ^{tend} transactions inside LGU. In addition, this program digitalized transactions specifically the payment of taxes, ~~or~~ imagine the privilege of having to pay your taxes ~~without~~ at home or anywhere without going to the ~~the~~ LGU offices. And for the eGOVPH, the same with eLGU, you can transact documents such as PRC documents w/out going to the said office. These programs of DICT will definitely make the life of Filipinos a lot more easier.
